Module 2, Topic 2, Lesson 1: Transforming Linear Functions

Name _____ Date _____ Period _____

1. The graph of linear function m is shown on the grid. Given f(x) = x and m(x) = a · f(x), what is the value of a?

a =

2. Jordan graphed f(x) and g(x) = f(x) − 4 on the same coordinate grid. Which statement describes how the graphs of f and g are related?

A. The graph of f(x) is translated up 4 units to produce g(x).

B. The graph of f(x) is translated down 4 units to produce g(x).

C. The graph of f(x) is translated right 4 units to produce g(x).

D. The graph of f(x) is translated left 4 units to produce g(x).

3. Function f is shown in the table. What is the y-intercept of g(x) = 2 · f(x)?

y-intercept =

x	f(x)
−1	−1
0	2
1	5
2	8

Bonus (Lesson 2 video): f(x) = x and g(x) = f(x + 3). Which way does the graph of f move to make g, and how far?

Direction and distance:
