TOPIC 2 Systems of Linear Equations and Inequalities

Name _____ Date _____

Reminders
Linear combinations: make one variable's coefficients opposites, then add the equations.
Multiply every term, including the number on the right side.
Fractions: multiply by the LCD first. Variable alone? Substitution is faster.

1. Use linear combinations to solve $x + y = 9$ and $x - y = 3$.

A. (3, 6)

B. (12, −3)

C. (6, 3)

D. (6, −3)

2. You add $2x + 5y = 4$ and $-2x + 3y = 12$. Which variable drops out?

F. y

G. both

H. neither

J. x

3. Solve: $2x + 5y = 4$ and $-2x + 3y = 12$.
